

Quality Policy

REM focus shall be continual improvement of our Integrated Management System in accordance with ISO 9001.

REM aims to operate a new and modern fleet in the offshore support market, and shall continuously strive to satisfy our customers' demands and to improve our operations in line with the best operating practices.

We make sure that we meet, or exceed the internal and external expectations that are placed on us. This is achieved by inserting the necessary resources, involvement and development of internal resources, as well as tight communication with our customers and other external interested parties.

A systematic process-based approach for registration, monitoring, reviewing and auditing key performance indicators in our Integrated Management System, is the core of our business as we continuously seek to maintain and develop our operational practices in compliance with the applicable guidelines and regulations.

Responsibility for maintaining the Integrated Management System lies with each manager within his/her respective division.

Fredrik Remøy
Chief Executive Officer
